12 Using Help & troubleshooting.

Contents:

11.1 Introduction

11.2 Pre-requisites

11.3 To start your session

PLEASE NOTE THAT THIS PAGE IS STILL UNDER CONSTRUCTION!

12.1 Introduction.

This section will introduce you to the Help utilities in Pro/ENGINEER.

12.2 Pre-requisites.

You must have successfully completed:

Pro/ENGINEER: 4 The starter part.

12.3 The Help utility.

From the pull-down menu click on **Help** and then **Contents and Index**.

This command will launch the web browser and load the default master help page.

The suppliers of Pro/ENGINEER no longer provide hard copies of the manuals. You now have to rely on using the Help. This is not a bad thing as more information is available and it is easy to access.

From the **Welcome to PTC Help** page you gain access to all of the information.

12.3.1 Index.

You will use the Help **Index** to find out about the **Pattern** command in Pro/ENGINEER.

Click on the **Index** tab.

📖 Note: You may have to wait over 30 seconds for the search data to load.

Type in the word **pattern**.

Locate and double click on **Pattern command** in the index list.
